COMPARITIVE ANALYSIS

TISTAA	BIOMETRIC ATTENDANCE SYSTEM (THUMB AND SMART CARD)
<p>Record Body Temperature - Thermal scanner integrated system that measure and record body temperature.</p>	<p>No such Mechanism Available.</p>
<p>Multiple People Screening - The device can screen multiple people in one frame.</p>	<p>No such Mechanism Available.</p>
<p>Infection Free - Attendance is marked by just showing face in camera, So no physical contact between the device and employee.</p>	<p>Infectious - Employee need to touch the surface to mark attendance, the chances of infection spread are very high.</p>
<p>Proxy Proof - People can swap smart cards but can't swap faces. therefore, no instance of proxies.</p>	<p>Proxy Prone - In case of the use of smart card, anyone can easily mark a proxy of another employee by swapping the card.</p>
<p>High Accuracy - The system is build using Artificial Intelligence technology, Hence, the accuracy of the system is high.</p>	<p>Low Accuracy - The current biometric system claims to make use of face recognition technology. but their product quality is very low.</p>
<p>API based system - The attendance data can be fed to HRMS system by integrating API. This reduces effort at HR level.</p>	<p>Standalone System - These are API less system and can't be integrated with the current HRMS system.</p>
<p>Analytics based Dashboard - Along with the attendance, HR can extract trend reports on absenteeism which will help a company in planning of its resources.</p>	<p>No Dashboard and Analytics - The current biometric system don't provide analytics-based dashboard.</p>
<p>Mobile Application - We provide mobile application for both HR and Employees to access information on attendance.</p>	<p>No employee Interface - Employees have to depend on HR system to check their attendance. There is no interface available for employees to confirm their attendance marked.</p>
